POTENTIAL DISINFECTANTS TO USE AGAINST CORONAVIRUS

This table is intended to assist persons in finding U.S. Environmental Protection Agency (EPA)registered disinfectants that may be used against coronavirus in various settings related to both humans and animals. The information below was obtained from the National Pesticide Information Retrieval System (NPIRS®)¹ on February 10, 2020. This table may not be an allinclusive list of EPA-registered disinfectants that could be used against coronavirus. The inclusion of any product on this table does not imply endorsement of the product by the United States Department of Agriculture (USDA) Animal and Plant Health Inspection Service (APHIS).

Disinfectants must be used according to the label appearing on the product container. The information obtained from NPIRS® and summarized in the table below should be consistent with EPA-registered labels, which can be found on EPA's Pesticide Product Label System (PPLS)² at <u>https://iaspub.epa.gov/apex/pesticides/f?p=PPLS:1</u>. EPA-registered labels are often identical to the labels appearing on the container; however, states may approve alternate language that differs from EPA's label. Please use the below table as a first step to identify a potential EPA-registered disinfectant to use against coronavirus, then locate the appropriate container label within the appropriate state at the following website <u>http://npirspublic.ceris.purdue.edu/state/</u> to verify all necessary use sites are on the container label.

¹ The National Pesticide Information Retrieval System (NPIRS[®]) is a collection of pesticide-related databases, applications, and websites under the administration of the Center for Environmental and Regulatory Information Systems (CERIS) at Purdue University, West Lafayette, Indiana. The NPIRS[®] obtains product information on a monthly basis from the EPA Pesticide Product Information System (PPIS) website. This PPIS information, including registered use sites and pests listed on the EPA stamped approved label, is disseminated through the NPIRS[®] member and public websites and is provided for informational purposes only. Information derived from the NPIRS[®] does not constitute a label replacement or a recommendation. Before applying any pesticide, applicators must determine if the product under consideration is correct for the intended use site. Always check the container/package label to determine if the intended use site is included on the label. Read and follow label instructions before using any pesticide product. More information on the NPIRS[®] can be found at <u>http://ppis.ceris.purdue.edu/</u>. Errors in the PPIS data can be reported at this website using the Data Quality menu option.

² To access the most recently approved product labels, see EPA's Pesticide Product Label System (PPLS) site at <u>http://iaspub.epa.gov/apex/pesticides/f?p=PPLS:1</u>. The pesticide product name, company name, or the EPA registration number can be used to access the product label in PPLS. If you enter the company name, a list of the company's products will appear. Select the product of interest. If you enter the product name or EPA registration number, a list of EPA-approved labels will appear in chronological order, with the most recent label appearing first. Click on the most recent date to obtain the most recent label.
